

The New Side of Summer School
By: Jared Kiesby

Summer school has long been seen as the place to go for students who need to get caught up with their classes, a place where students can go to replace a bad grade or take classes that are necessary for graduation. Summer school is still a great place for students to get caught up, but its purpose has also begun to evolve. Many students are now turning to summer school and summer enrichment programs to get ahead in their classes and supplement their already impressive high school career. Summer time is the perfect time for students to get ahead, and with a variety of programs to choose from the options for summer enrichment are endless.

One popular option for students is summer classes. Summer classes offer students the chance to get caught up in classes they have fallen behind in or replace poor grades in classes they have taken in the past. Summer classes also provide students with a great opportunity to get ahead. One popular option for summer school is to take the third semester of a three semester math class or the first semester of a higher level math class to get the course done with sooner. Many students choose summer school to help them fulfill their high school math requirement and free their regular semester for additional classes. When choosing a summer school class it is important to realize that space is limited and the school district only offers core classes. Single subject private schools are also a great option when it comes to taking a summer school class and they offer a wide variety of classes.

Not only is summer a great time for student to take classes for credit but there is also a wide variety of enrichment programs available for students looking to prepare for upcoming classes. Some of the most popular summer preparation options are classes that prepare students for the transition between pre-algebra and algebra. These classes help student sharpen the skills necessary to be successful in the district's rigorous algebra courses. Students are also turning to preparation courses to help them prepare for many of their higher level courses. Many students choose this option because enrichment courses tend to be less rigorous than an actual course for credit but they still prove to be invaluable to students in their upcoming math classes.

Remember there are a lot of options out there and it is important to do your research and find the one that is right for you and your child. The right summer program can be fun, enriching and something that both you and your children can look forward to.
